Position: Corporate Sustainability Manager

Location: Midwest U.S.

The Corporate Sustainability Manager is a highly visible, and very “hands-on”, position within the company and will have responsibility for: corporate/global environmental sustainability; environmental management systems; and environmental policies, programs and procedures. This position will encompass approximately 70% sustainability and approximately 30% environmental compliance duties.

NOTE: Please read the Duties and Requirements very carefully and submit resumes only if meeting the listed criteria. Candidates not meeting said criteria will not be considered.

Duties include:

- Developing, implementing and managing company-wide environmental sustainability programs, standards, and efforts,
- Developing, implementing and managing environmental profiling; materials and resource usage reduction programs; pollution prevention programs; climate change and energy reduction programs; and chemical and waste management programs.
- Developing and implement energy reduction and waste minimization projects, initiatives and continuous performance improvement opportunities.
- Supporting global operations with regulatory and permit compliance requirements,
- Developing, implementing and managing initiatives to manage and reduce the company’s environmental profile, risks and liabilities,
- Serving as an “on site” mentor to global facility EHS professionals regarding sustainability, environmental compliance and permit management.
- Managing the environmental systems and programs to control, mitigate or abate air, water, and waste activities while minimizing or eliminating their impact to the environment, community and natural resources.

Requirements:

- Minimum of a Bachelors degree in engineering, physical science, or related technical field, with a minimum of eight (8) years environmental/engineering experience in a) manufacturing environment. (Chemical manufacturing is highly preferable)
- “Hands on” global and multi-plant experience (physically having visited plants), allowing successful candidate to have obtained multi-cultural experiences

- Demonstrable experience in Sustainability program development (*including all Duties listed above*) and implementation to include reducing GHG, carbon foot printing and emission reduction, reducing utility and landfill usage, and VOC reduction.
- Ability to travel, both domestically and globally, as required at least thirty-five (35) percent of the time.
